

What would you consider to be the benefits of introducing a mandatory requirement for card / cash payments?

Young people these days very rarely carry cash
Benefits public not the driver
It's better to not carry so much cash around with you sometimes
A lot of people don't carry cash anymore
I was parked on the rank by the railway pub the other night and couple went to the first 5 taxis on the rank and none of them accepted card payment, and as usual it was raining so the potential clients were getting wet.
Easier for them to pay
Only benefits customers
It would not benefit either.
Na
Not all people carry cash.so a choice is beneficial
No benefit
No benefits as customers have never asked for electronic payment means
It gives the public an extra and easier way to pay.
Customers would have the option as not everyone carries cash.
lot off people do not carry cash this days .always people have to concern how to pay, that proposal will help
It only benefits banks and card machine companies. We should always use cash before we lose it. Machines break down, what happens then?
Public could use card but its to no benefit of the drivers
Card payment is getting more increasingly the way to pay ..
I've been accepting card payments for the last 3 years and it gives your customers better freedom as they don't have to worry about having cash and let's be honest it is the 21st century
There's nothing worse than you get to their destination and there's no signal to do transaction and your driving around looking for signal and then they don't want to pay more and it's all on the trade to cover extras it's a nightmare
No benefits to trade as it incurs card charges and diminishes earnings, as well as diminishing the use of cash
Public not need to look for card payments cars and be driven to atm to get cash out
None
Ease of payment most people under 50 use card only the ones above really use cash now I've been accepting cards for five years now
the public might find this beneficial but they don't pay the bank charges
It gives public more options however it's reliant on the driver having signal etc
Choice of payment methods.
Not all the public carry cash.
Convenience.
Flexible methods of payments.
Cash is king and less hassle
Every one carries card and phones these days
n/a
See previous answer
Lots don't carry cash
Easy payment system

What would you consider to be the benefits of introducing a mandatory requirement for card / cash payments?

No benefit.
BENIFITS BOTH, PUBLIC CONVENIENCE ,MAY INCREASE TRADE
Easier for customers
Convenient
PEOPLE DO ASK AND IN FUTURE WILL PROBABLE CHOOSE TAXI WITH CARD PAYMENT FACILITIES
Payments made in a Taxi most people today since covid dont carry cash ,you shouldnt have to go running around looking for cash point machines etc. I think it should be treated the same as in retail the same as making payments over the phone.
Lots of people don't use cash
All customers no matter who they are should be given a choice on how payment should be made by either cash or card.
Accessibility
Not compulsory to use one
no benefits, more risk for the driver
Easier than keeping cash or having to go via cash point
Nice to have the option
Reducing cash handling.
No benefit to the trade only financial loss
There needs to be an option for benefits to none. The only benefit is to those who want to monitor where and what people spend money on. This is just another attempt to take away the option of paying with cash. Do not include my answer as benefits to the public in your statistics, as I don't agree with it but had no option to not answer the question to submit a response. This is a very disingenuous way of making people say there's a benefit even if they don't think there is one. Rather shameful way to skew results.
Explained above 
Because not everybody carries cash.
The trade will not benefit whatsoever, quite the opposite in fact, it will suffer due to loss of money and paying fees. This will only benefit consumers and greed of the banks.
Misfortune to the trade, only slight benefit to public and banks.
Benefits the trade and public
No benefit
If you have both options, you can carry both cash carrying customers and card only paying
Most people don't carry cash anymore and I strongly believe that taxi trade also should be able offer alternative payment methods.
makes it easier for the public
Do not agree
Easier
Most people use card
A benefit for the trade only. I can't see any sense, nowadays almost everybody book taxi is through apps and pay directly on them. Let's move one toward a cash free environment that will reduce tax evasion! And will guarantee an equal law treatment
Convenient payment
The council should not be able to make us lose money by making it electronic
So us drivers lose more money
Convenience, as less and less people carry cash.

What would you consider to be the benefits of introducing a mandatory requirement for card / cash payments?

Some customers want to pay card

Since Covid many people now use their card for most payments and no longer have cash

they should have a choice and not required to go to a cash point

Na

More and more people use cash less

Because if customers don't have they are card at hands, is option to pay by phone

So many use phones and card to now pay its a saf reality times are moving but not for the good but then the good point if they have a taxi and have no cash it's easier for them to pay card rather than going looking for a cash point on route where it may even cost them to draw out this cash but the sad part it's going to cost the taxi in bank charges

make it easier for customers , its purely customers benifits

You need the choice
