Key Features:

- Tamperproof – lockable doors with acrylic covers and simple aluminium trim
- Part of the Resist-A-Flame® range - fire retardant
- Aluminium Frame - durable, protective and low maintenance
- Eco friendly core made from recycled plastic bottles
- Ideal for displaying notices in high traffic areas

As your notices can be of high importance, it is vital that they are unable to be tampered with. With these tamperproof noticeboards, you can protect your notices against damage in areas with high traffic, high chance of contact, and in the presence of children. With the addition of a fire retardant Eco-Colour® core made from 100% recycled material, this range is also reliable, convenient and safe in even the most demanding environments.

Eco-Colour® Board

Eco-Colour® Noticeboards are not only eco-friendly, but sturdy and durable for reliability too. Despite this, the material is lightweight for quick and easy installation.

Each board is made from 100% recycled plastic bottles, with the standard 900 x 1200 size using 33 x 250ml bottles in total! Due to the absence of cloth, Eco-Colour® noticeboards will only accept pins, and not hook and loop. However, by eliminating cloth, the board is much better for the planet, and longer lasting where cloth can get damaged easily under frequent or heavy use.

As part of the Resist-A-Flame® range, each Eco-Colour® noticeboard has been fully tested and classified to the European 'Reaction to Fire' test for your safety and peace of mind, with the core complying with EN13501-1 Class B for Fire Retardancy.

Eco-Colour® also has acoustic properties to reduce noise in busy environments up to NRC 0.8, making them ideal in busy public areas, as well as schools and offices.

Aluminium Frame

Surrounding the board's surface is a simple aluminium trim offering durability, easy-cleaning and low maintenance. This frame not only provides a classic, professional looking finish, but is lightweight and affordable for your convenience too.

Tamperproof

Whilst the frame will cover sharp corners and protect the noticeboard edges from scuffs, the clear covers will also protect against tampering. This is important in areas with children where they may

take notices or pins, as well as busy areas where paper may get accidentally pulled off, blown away, or spilled on. The clear covers are cheaper than PET alternatives, yet remain as clear to see through as glass for easy reading, and are additionally classified to BS EN13501 Class B for fire safety.

Single Lockable Door

As this noticeboard uses a single door, it can be mounted horizontally or vertically (hinges to side, base or top) with the concealed corner fixings, based on preference and available space. For a more attractive and professional appearance, the door conceals the sturdy, high-quality hinges, which make for a smooth opening and easy access to the noticeboard surface whilst keeping the door firmly aligned. The door locks firmly in place with two keyed locks to prevent casual interference and provide general protection to your contents.
