NB: These figures do not include any spend on the DFG cases.

For more information, please see feedback appendix.

Since 01.09.2024, we have recorded the distribution of gadgets by cases:

Disabled Facilities Grants (DFG's)

The project has 2 properties where smart technology is being provided as part of a DFG and is being funded through the AT pilot. Both properties are within HBBC.

Hinckley:

In December 2024, a radio frequency door opener and a radio frequency gate opener were installed (the service user decided not to have the radio frequency window opener). The cost of the works was £6,178.75 (which included a 2 year extended warranty). This has been paid.

Ratby:

There was an initial delay as the works could not commence until the service user had been in the property for 12 months due to the developers defect period. The property was built in July/ August 2023 and the landlord is Platform Housing.

In November 2024, 3 radio frequency window openers were installed. The cost of the works was £3,272.80 and payment will be made once the final inspection has taken place by a tech officer.

The same property is currently awaiting installation of an outward opening automatic door and the net cost to the AT pilot will be in the region of £1,036.41 (Platform Housing is contributing £10,000).

Staffing

Carrie Jackson, Dementia Coordinator retired on 06.11.2024.

Charlotte Christie-Smith rejoins the Team on 13.01.2025 on a secondment as the Assistive Technology Team Leader.
