## Menu of interventions

Following feedback from you, and to allow us to consolidate the range of grants that were available between 2022-23 and 2024-25, we have updated the menu of interventions to support this year's planning. We have also enabled greater detections of the control of

As in previous years, the expectation is that your plans cover a broad range of interventions to support more children, young people and adults to access treatment and to improve the quality of your local treatment and recovery system of care.

As well as continued ambition in reducing levels of unmet need for children, young people and adults, we welcome an enhanced focus on the quality in your treatment and recovery systems of care. We believe that an enhanced focus on quality will reduce attrition rates, improve the number and proportion of people making progress in treatment, support more adults to initiate and sustain recovery and reduce the number of people dying. In turn, continued improvement in the range and quality of support being provided will make services more attractive, accessible, and effective.

Please note the system elements described here are to indicate how these interventions are expected to benefit your system. This will support the continued analysis of spend nationally. These are intentionally different from the priority focus areas within the 2025-26 Plan. The priority focus areas are topics of strategic focus to enhance the quality of recovery oriented systems of care.

System elements	Interventions	Examples of roles or activity this could cover
System elements		
System coordination and commissioning workforce  Expanded core treatment and recovery workforce	Commissioning officer or lead	Including additional capacity for young people and adult commissioner roles, or a function to support regional or sub-regional commissioning
