

Appendix Two: Potential Additional Carriageway and Footway Work 2025/26 Financial Year

Based on lifecycle modelling using current carriageway and footway condition data, the funding requirement to maintain these assets in a steady state condition for the 2025-26 financial year is £6,827,844 for carriageways and £3,344,952 for footways.

The additional funding will enable the service to maintain the carriageway and footway assets in a steady state, stemming the decline seen in some areas of the network. These works will also look to reduce the incidents of third-party liability claims, the need for more costly reactive maintenance and enable the service to continue to apply a preventative maintenance approach. It will also allow the Council to treat the assets at the optimum time, reducing carbon emission associated with maintenance and supporting active travel across the borough.

The recent Sandwell Customer Satisfaction survey highlighted the importance of the highway network to Sandwell's residents, with the survey finding that "Maintaining Roads and Pavements" is considered important by high proportions of respondents in both the representative survey (72%) and the online survey (79%). Maintaining this vital asset in a good condition also supports the Council's aims and objectives in the Sandwell Vision 2030. Specifically ambitions 2,6, 8 and 10, being a borough where residents live healthy and longer lives, a location of choice for industries of the future, supporting excellent and affordable public transport systems and having a reputation as an authority which gets things done and is focussed on what really matters and people's lives and communities.

The tables listed below show the potential carriageway and footway programmes for 2025-26 based on receiving an additional gap funding allocation of £2,500,000 for 2025-26 as outlined in the cabinet report. The schemes shaded in red are the schemes which we would be unable to complete should the additional funding is not received.

Potential Forward Programmes 2025/26

Table 1.1 – Potential Carriageway Resurfacing Schemes 2025-26	4
Table. 1.2. Potential Carriageway Surface Treatment Schemes 2025/26	6
Table. 1.3. Potential Carriageway Patching Schemes 2025/26	9
Table 1.4. Potential Footway Resurfacing Schemes 2025/26	14
Table 1.5. Potential Footway Surface Treatment Schemes 2025/26	18

With this additional funding, the highways service would look to undertake the following additional work which would otherwise not be possible:

- An additional 17 carriageway resurfacing schemes and 36 carriageway patching schemes to treat the areas of the network in the worst condition and look to stem the steady decline seen in the condition of the unclassified carriageway network.

- An additional 19 carriageway surface treatment schemes, which look to prolong the life of the asset at the optimum time by sealing the surface to reduce water ingress to slow further deterioration of the surface, reducing the future need for more costly structural treatments.
- An additional 27 footway resurfacing schemes to treat the areas of the network with structural deterioration, reduce trip hazards and promote active travel.
- An additional 10 footway surface treatment schemes across multiple streets, treating the asset at the optimum time to prolong its life and prevent it from deteriorating further, whilst also applying a low carbon treatment option.
- Increase the number of schemes completed to improve skid resistance and road safety on our principal A roads, aiming to reduce accidents and improve the areas of the network with poor skid resistance, in turn providing a safe and reliable highway network.
- Continue the use of the new MultiHog machine to tackle smaller areas of structural deterioration on the network, preventing them from developing into larger more costly resurfacing schemes.

The programmes have been developed to tackle the increase in the areas of red risk condition or structural deterioration seen in our condition indicators on the unclassified carriageway network and footway network. The programmes are therefore designed to treat a greater proportion of the areas of the network in greatest need and have the following splits:

Proposed Carriageway Spend 2025-26

Treatment Type/Road Class	Proposed Spend (£)	% of Total Carriageway Spend
Carriageway Resurfacing		
Classified	£884,091.11	12.89%
Unclassified	£3,206,413.71	46.76%
Carriageway Surface Treatments		
Classified	£135,036.79	1.97%
Unclassified	£2,009,688.41	29.30%
Carriageway Patching		
Classified	£159,124.86	2.32%
Unclassified	£463,526.44	6.76%
Totals:	£6,857,881.32	100.00%

Total Proposed Carriageway Spend 2025-26

Road Class	Proposed Spend	% of Total Spend
Classified	£1,178,252.76	17.18%
Unclassified	£5,679,628.56	82.82%
Total:	£6,857,881.32	100%

Total Proposed Footway Spend 2025-26

Treatment Type	Proposed Spend	% of Total Spend
Footway Resurfacing	£2,984,402.68	90.23%
Footway Surface Treatments	£323,195.30	9.77%
Totals:	£3,307,597.98	100%

Please note that some streets may be listed more than once on the lists, this is due to there being more than one scheme area identified along a stretch of road or the need for preparatory works to be carried out before a surface treatment can be applied. The programmes are also subject to change following engineering inspections which will confirm the most suitable treatment option and extent of the schemes.

Table 1.1 – Potential Carriageway Resurfacing Schemes 2025-26

Carriageway Resurfacing Potential Sites 2025/26		
Road Name	Town	Estimated Cost (£)
Black Country New Road	Wednesbury North	£41,505.58
